ARAVIND BALINENI

Automation Technical Lead · Agentic Automation & AI

Hyderabad, India · aravindbalineni123@gmail.com · +91 9963779790 · LinkedIn · Portfolio

11+ Years	70+ Projects	25+ Engineers
IT Experience	Enterprise Automations	Built & Mentored

PROFESSIONAL SUMMARY

Automation Technical Lead with 11+ years in IT, including 8+ years focused on intelligent and agentic automation. Delivered enterprise-grade automations across healthcare, telecom, and finance, leading teams from architecture through production. Work sits at the intersection of RPA, AI agents, and document intelligence, with a strong track record of reducing manual effort, cutting turnaround times, and building systems that hold up at scale.

KEY ACHIEVEMENTS

- **Enterprise automations at scale:** Delivered 70+ automation projects across healthcare, telecom, and finance as both individual contributor and technical lead, spanning RPA, document AI, agentic workflows, and system integrations.
- **End to End Agentic Automation:** Delivered a **90% reduction in manual effort** across healthcare processes by designing and implementing a comprehensive agentic automation solution spanning intake, document extraction, intelligent decision routing, and payer portal submission.
- **High-volume processing:** Reduced a critical processing cycle from 48 hours to 5 hours with bots handling up to 150,000 transactions per day on peak workloads.
- **Team leadership and growth:** Built and managed a bench pool of 25+ automation engineers, driving upskilling programs, certification readiness, and project placement across active engagements.
- **Multi-Agent Agentic AI in production:** Designed and shipped production-grade agentic automation systems using LangChain, LangGraph, and UiPath BYOA, integrating coded AI agents into enterprise RPA pipelines specifically for Healthcare.
- **Recognized consistently:** 5 company awards including Top Performer in Delivery Excellence at Accelirate, Digital Warrior for Innovation and OOB solutions at Tech Mahindra (2021), and Star Performer in 2018 and 2020 for Delivery excellence.

TECHNICAL SKILLS

AI & Agents	LangChain, LangGraph, UiPath BYOA, agentic workflows, human-in-the-loop automation, AI classification & extraction
RPA Platforms	UiPath Studio, Orchestrator, REFramework, Custom Activities, n8n, webhooks, event-driven pipelines, Document Understanding, ABBYY FineReader, ABBYY Cloud OCR, Microsoft OCR, Tesseract, ML extractors
Programming	Python, Java, VB.Net, SQL, Google Apps Script, Python-Flask
Integrations	REST APIs, Salesforce, ServiceNow, JIRA, Amazon S3, Kibana, relational databases
DevOps	Docker, Git, Jenkins, CI/CD, self-hosted automation agents
Domains	Healthcare (Prior Auth, Claims), Telecom, Finance

WORK EXPERIENCE

Automation Technical Lead *Accelirate Softech, Hyderabad* *Nov 2021 to Present*

End-to-end ownership of agentic and intelligent automation solutions for clients in healthcare, telecom, and finance. Led architecture, solution design, team delivery, and client advisory. Managed a 25+ person bench pool over 2 years.

- **Architected and delivered production agentic frameworks** combining RPA, document understanding, API orchestration, and coded AI agents with human-in-the-loop approval flows.
- Designed and shipped automations across multiple client accounts using UiPath, n8n, Python, LangChain, LangGraph, and UiPath BYOA.
- Served as primary technical advisor to clients, translating business problems into automation roadmaps and owning solutions end to end.
- **Led a team of 10+ engineers** and governed a shared library of reusable components, custom UiPath activities, and coding standards that accelerated delivery across engagements.
- Integrated enterprise systems including Salesforce, ServiceNow, JIRA, Amazon S3, Kibana, and multiple REST APIs into automated workflows.
- Mentored engineers toward UiPath Developer Professional and AI Professional certifications through a structured upskilling program.

Senior Software Engineer *Tech Mahindra, Hyderabad* *Sep 2014 to Nov 2021*

Delivered enterprise RPA automations for large healthcare clients over 7 years, growing from developer to lead contributor on complex, high-volume processes across clinical, billing, and operational workflows.

- **Cut a critical processing cycle from 48 hours to 5 hours** by building bots that handled up to 150,000 transactions per day at peak load.
- Implemented intelligent document processing with UiPath, ABBYY, Microsoft OCR, and Tesseract across varied document types and formats.
- Built a Hangouts chatbot integrated with UiPath and Python, earning the Digital Warrior Award in 2021.
- Developed COVID-19 response bots that gave scientists faster access to drug utilization insights during the pandemic.
- Recognized as Star Performer in 2018 and 2020 for consistently delivering high-impact automations ahead of schedule.

FEATURED PROJECTS

Prior Authorization Automation | *Healthcare · UiPath, Document Understanding, Agentic AI, REST APIs*

- Automated the full prior auth lifecycle from intake to payer portal submission, eliminating manual steps at every stage.
- ML extractors trained on clinical documents handled referral letters, insurance forms, and clinical notes with high accuracy.
- Agentic decision engine routed standard cases to auto-submission and escalated complex ones with full context for clinical review.
- Human-in-the-loop approval built into the workflow so staff could review or override decisions at any point, balancing automation with control.
- In the next phase, rolling out the complete solution as a packaged offering, including integrated case management for case handling and process apps for custom UI dashboards.

Claims Denials Automation | *Healthcare · UiPath, Gen AI Classification, Human-in-the-Loop*

- Built an AI-driven workflow to classify denied claims by type (coding errors, eligibility issues, missing auth) and route each automatically.
- Classifier trained on historical denial data improved accuracy over time without requiring full retraining.
- Straightforward denials corrected and resubmitted automatically; complex ones escalated with full context to the right team member.
- First-pass resolution rate improved significantly and leadership gained visibility into denial patterns by payer and denial type.

SkyHop Transportation Automation | *Transportation · n8n, Agentic Pipelines, AI Extraction*

- Built agentic n8n pipelines to extract crew pickup and drop schedules from unstructured emails and multi-format spreadsheets.
- AI extraction handled varied sender formats without requiring separate rules per source.
- Normalized and merged email and spreadsheet data, resolved conflicts, and pushed final schedules to the transportation system via API.
- Eliminated a daily manual reconciliation task entirely and reduced scheduling errors across operations.
- Effectively reducing 80% manual effort.

CERTIFICATIONS & AWARDS

CERTIFICATIONS

- UiPath Certified Developer Professional
- UiPath Specialized AI Professional
- UiPath Certified Agentic Automation Associate

AWARDS

- Top Performer, Accelirate Q2 2024 to 2025
- Bronze, Accelirate Championship Program 2024 and 2025
- Spot Award, Accelirate Q3 2022 to 2023
- Star Performer, Tech Mahindra 2018 and 2020
- Digital Warrior Award, Tech Mahindra 2021

EDUCATION

Bachelor of Technology, Electrical and Electronics Engineering *2010 to 2014*

VNR VJIET, Hyderabad
